

## Letter of Intent

The Signatories hereby declare their intention to:

- I. Supply the EU market in 2013 with chargers that meet the existing European standards for products within the scope of the *MoU on harmonisation of a charging capability for mobile phones*, June 5, 2009.
- II. Work towards the harmonisation of a charging capability for future generations of mobile phones, while considering:
  - The existing DIGITALEUROPE position paper on future work on chargers for mobile phones
  - The power needs for future generations of mobile devices and their associated charging technologies
  - The transition from the existing European standards for mobile phone chargers to potentially new European standards developed by Standards Development Organisations should make specific EU regulation unnecessary
  - That minimum geographical area should be the European Union, but aiming towards a global reach.
  - Any future industry self-commitment must be open to all interested manufacturers independent of DIGITALEUROPE membership.
- III. Regularly report on the progress of this work under item II to the European Commission and to other interested parties.

### List of signatories:

- Apple
- BlackBerry
- Huawei
- LGE
- NEC
- Nokia
- Samsung
- Sony.

Brussels, 12 April 2013.
